

## Ecoshel Premium / Standard Comparison

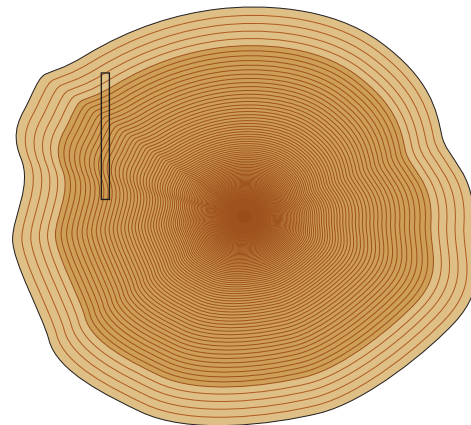

### ★ Premium ★ Selected #1 18"

- 100% Vertical Edge Grain
- 100% Heartwood
- 100% Clear
- Kiln Dried
- Selected  
Shingles that are split, warped, or defective are excluded.

*Ecoshel Premium Shingles are the highest quality Western Red Cedar Shingles available. Premium shingles are the best choice for sidewall applications, and the only choice for roofing. Because roofing shingles should never be sealed, they depend on the inherent dimensional stability provided by 100% clear, vertical, edge grain to perform well through continuous wet/dry cycles.*

### Standard Selected #2 18"

- Mixed Grain - some flat grain.
- Mostly Heartwood - some sapwood.
- 100% Clear for the lower 11".  
Some defects in the upper non-visible portion of the shingle.
- Kiln Dried
- Selected  
Shingles that are split, warped, or defective are excluded.

*Ecoshel Standard Shingles provide a good economical alternative for sidewalls, but only when they are pre-finished. Mixed grain shingles have much less potential to warp or split when they are sealed on both sides. In addition, kiln drying allows us to identify shingles that have a tendency to warp or split when drying. These shingles are excluded from the manufacturing process.*
